

# MLTI

## Assign Local VPP Purchases to MLTI iOS Devices

Updated Friday, November 6, 2015

### Requirements:

- School Volume Purchase Program (VPP) account credentials
- JAMF Site Admin Credentials

### Summary:

This document describes the process for schools to purchase iOS app licenses that can be installed directly on MLTI devices without user intervention and without the need for an Apple ID. When an institution purchases Managed Distribution app licenses, the institution can assign and revoke the apps through the JAMF management system provided by MLTI.

*Note:* This document assumes that VPP enrollment has been completed. If your institution has already enrolled in Apple ID for Students, you'll automatically be enrolled in VPP. There may be some additional steps to complete, but you do not need to enroll again. If your institution has not enrolled in either program, you can start the enrollment process at [deploy.apple.com](http://deploy.apple.com).

## Step 1 - Purchasing VPP Credit

*(if you have already purchased VPP Credit, skip to Step 2)*

Go to <http://store.apple.com/us/browse/home/findyourschool>

or sign in as your school here: <https://ecommerce.apple.com/asb2b/fys.do?language=EN&country=US>

Got to the Solutions & Offerings tab, select Volume Purchase Program Credit from the dropdown menu.

Choose Volume Purchase Program Credit for Education. Enter the amount, VPP account holder name, institution name, and VPP account holder email address.

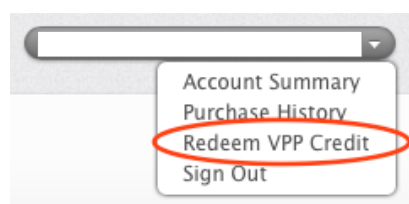

NOTE: Please ensure that you have entered the email address of the registered VPP Admin who will be redeeming the credit. Registration in the Volume Purchase Program is required to purchase and redeem VPP Credit.

A VPP Credit code will be emailed to the VPP admin within 24 hours of the purchase date.

## Step 2 - Redeeming VPP Credit & Purchasing Apps

*(if you have already redeemed VPP credit and purchased apps, skip to Step 3)*

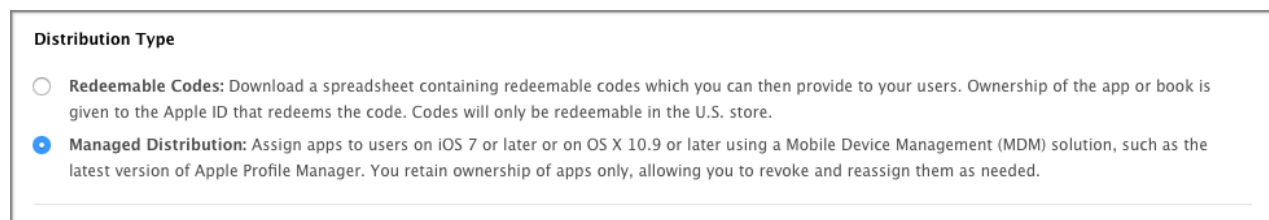

Once credit has been purchased, the VPP admin will need to redeem the credit on the VPP site.

Go to [deploy.apple.com](https://deploy.apple.com) and log in with the VPP Admin Apple ID. From the dropdown menu, choose Redeem VPP Credit. Enter the code provided in the email and click the redeem button.

A search interface with a text input field labeled "Search" containing the placeholder "Name, ISBN, or Link". To the right is a "Media Type" dropdown menu currently set to "All". A "Search" button is located to the right of the dropdown.

Next, in the search field, enter the name of the app you want to purchase. Verify that you have selected the correct app, enter the quantity you want to purchase, then select Managed Distribution as the distribution type.

A section titled "Distribution Type" with two radio button options. The first option is "Redeemable Codes" with a description about downloading a spreadsheet. The second option, "Managed Distribution", is selected with a blue dot and includes a description about assigning apps to users via MDM.

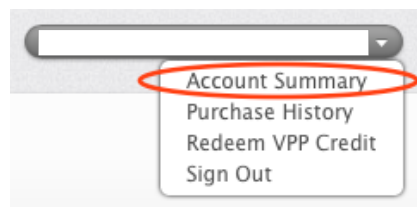

Click the Review Order button. Review the purchase you plan to make and then click the Place Order button.

## Step 3 - Adding VPP Token to JAMF

*(if you have already added your VPP token to JAMF, skip to Step 4)*

To manage VPP apps through JAMF, a VPP token must be downloaded from the VPP website and added to your site in JAMF.

On the VPP website, choose Account Summary from the dropdown menu.

Under Managed Distribution, click the Download Token Link. This will download your VPP token to your device.

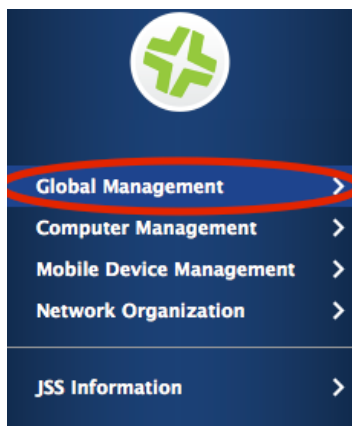

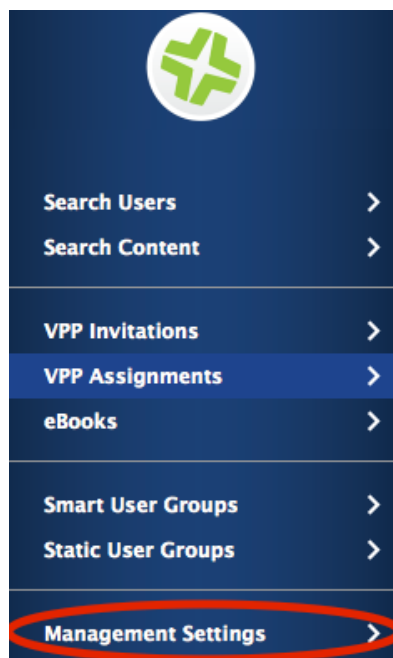

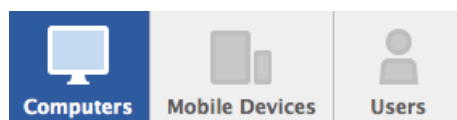

### Account Summary

#### Managed Distribution

Easily assign apps or books to users on iOS 7 or later or on OS X 10.9 or later using a Mobile Device Management (MDM) solution, such as the latest version of Apple Profile Manager. If you have an MDM solution, you can download a token which can be used to link your MDM solution with your VPP account. Once linked, you can invite users, assign apps and books, and revoke and reassign apps directly through your MDM solution. This token will expire after one year or after a password reset.

[Download Token](#)

Log in to [maine.jamfcloud.com](https://maine.jamfcloud.com) with your site admin credentials. Select either Computers or Mobile Devices tab, choose Management Settings, choose Global Management, then choose VPP Accounts.

## Global Management

### VPP Accounts

## VPP Accounts

Click the + button to add a new VPP account.

Enter the name as school code-school name.

Upload the VPP token you downloaded in the previous steps by clicking the Upload Service Token Button.

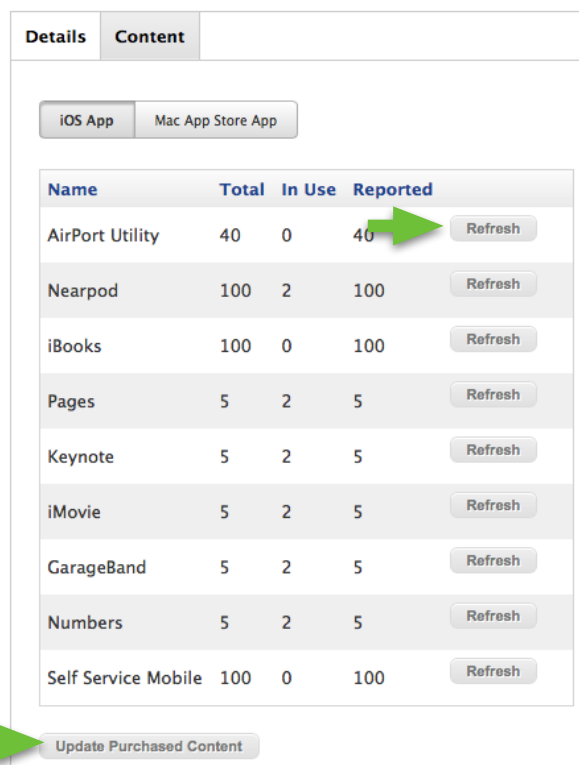

Enter the Apple ID associated with the VPP Account

The 'New' form for adding a VPP account. It includes fields for Display Name (required), Contact, Service Token (with an 'Upload Service Token' button), Account Name, Expiration Date, Country (dropdown menu), and Apple ID.

**PLEASE NOTE:** Your VPP token can only be used in one school site at a time in JAMF. If you attempt to upload the same token to a second school, any assigned apps will be revoked from users at the previous school site.

When you purchase additional apps, it may take some time for JAMF to reflect your recent purchases. You can manually update JAMF by going to Mobile Devices (or Computers) > Management Settings > Global Management, and selecting your VPP Account. Once there, select Content, iOS App and then click the Refresh button beside the app or click the Update Purchased Content button and search for the new app you have already purchased. JAMF will add your new purchases to the list.

Once your purchases are reflected in this list, you can move to Step 4 to assign the apps to devices or device groups.

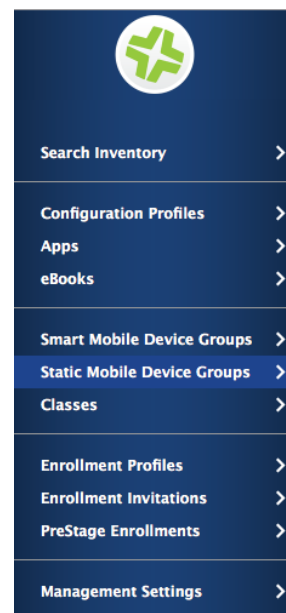

Details		Content	
iOS App		Mac App Store App	
Name	Total	In Use	Reported
AirPort Utility	40	0	40
Nearpod	100	2	100
iBooks	100	0	100
Pages	5	2	5
Keynote	5	2	5
iMovie	5	2	5
GarageBand	5	2	5
Numbers	5	2	5
Self Service Mobile	100	0	100
Update Purchased Content			

## Step 4 - Assigning Apps to Devices or Device Groups

Once you have refreshed your purchased content, you can set up the app to be automatically installed on specific devices. Our recommendation is to build a Static or Smart Mobile Device Group and manage device assignment by moving devices in or out of that group.

In this example, we will build a Static Mobile Device Group. Smart Device Groups are also an option if you have specific device criteria that you want to base installation of the app upon.

Build a Mobile Device Group by going to Mobile Devices > Static Device Groups and clicking the + button.

Create a logical name for your group.

## Airport Utility App Group

Once you click Save, JAMF will begin the process of assigning and installing the apps on the scoped devices. Devices will need to be unlocked and have an active internet connection to have apps installed. App installation times may vary.

**If you have any questions or issues with this process, please escalate by calling the MLTI AppleCare Help Desk at 800-919-2775 and use the pin# 4MLTI.**
